End-to-End partnership for future growth

Using our KojoX[™] operating philosophy our partners benefit from our modular manufacturing approach, maximizing operations and design through:

- Alignment across scales and technologies providing fast scalability and de-risking the supply chain
- Expedited regulatory approval fueled by broad experience supporting the entire product life cycle
- Supply chain agility, redundancy, and scalability with Tech Transfers across our integrated network

Problem | What We Provided | We Did | How We Did It | Results | Winni Solution

End-to-End Need

FUJIFILM Diosynth Biotechnologies' partner has a new program that they want to begin quickly. They need a partner with extensive experience in biologics manufacturing that can fulfill their requirements for drug substance, drug product and finished goods, including the ability to deliver the final product via autoinjectors.

Utilizing Our End-to-End Network

FUJIFILM Diosynth Biotechnologies presented a solution utilizing our end-toend expertise and capabilities at one of our commercialscale sites.

Meeting Partner's Needs

Discussions began at a critical point during an expansion project, and the teams collaborated to identify specific equipment configuration needs and equipment validations that could be designed to accommodate the partner's needs. Additionally, the process flow and procedures to develop a complete end-toend service offering that includes DS->DP->FG could be customized to ensure a mutually beneficial configuration.

Utilizing Integrated Network Benefits

Process Development and Process Characterization work is occurring at multiple sites across our integrated network. This integration allows for smooth Technology Transfer into the commercial-scale facility when the expansions are completed.

Complete Solution

The FUJIFILM Diosynth Biotechnologies partner gains the benefit of a complete solution provider, offering DS, DP and FG services from a single site. Their success is ensured by utilizing a team with a long track record of successful delivery of commercial product with the additional benefit of added capacity to support growth in product demand.
